Open Application | Innovation, Technology & Strategy

September 2026

Dear Hiring Team,

Some cover letters begin with enthusiasm for one vacancy. This one begins more honestly:
I am looking for a role connecting innovation management and technology with strategy and finance.
Along the way, ccvt demonstrates how I structure applications like this one.

At CENVION, I introduced Claude and RAG-based search into investment and reporting workflows.
At Airbus, I turned 20+ years of safety-critical data into risk and cost signals; at Swisscom,
I modelled cloud economics and infrastructure decisions – technology used to improve real decisions.

The commercial side belongs in the same picture: project-finance and M&A models, eight-figure investments,
CHF 10m+ supplier negotiations and end-to-end project P&L in my own consulting work.
I can build a prototype and explain the strategic and commercial case for building it.

- 1 Innovation & Technology | Agentic AI, cloud systems and 50+ open-source projects
- 2 Applied AI & Data | RAG search, ML risk analysis and intelligent automation
- 3 Strategy & Transformation | SteerCo decisions, TOM and operational delivery
- 4 Finance & Investment | Project finance, DCF, portfolio and scenario analysis
- 5 Entrepreneurial Delivery | Consulting across four markets and end-to-end project P&L

That does not produce a linear specialist profile – fortunately: I understand emerging technology hands-on,
frame its strategic relevance and carry it into delivery with a sound business case.
The more interesting problems tend to live at exactly those intersections.

If your team needs someone who does more than put innovation on slides – someone who analyses it,
builds it and translates it commercially – we should talk. Here for the template? Fork it, add your facts,
verify every claim, and turn the same framework into a strong cover letter of your own.

Yours sincerely,

Julian Yves Richard Corbet
