## Open Application | Innovation, Technology & Strategy

September 2026

Dear Hiring Team,

Some cover letters begin with enthusiasm for one particular vacancy. This one begins more honestly: I am looking for a role that connects innovation management and technology with strategy and finance – while ccvi demonstrates how I structure applications like this one.

At CENVION, I introduced Claude and RAG-based search into investment and reporting workflows. At Airbus, I translated more than 20 years of safety-critical data into risk and cost signals; at Swisscom, I modelled cloud economics and infrastructure decisions. Technology matters most to me when it improves real decisions.

The commercial side is part of the same picture: project-finance and M&A models, eight-figure infrastructure investments, CHF 10m+ supplier negotiations, and end-to-end project P&L in my own consulting work. I can build a prototype and explain why it is worth building.

- 1 Innovation & Technology | Agentic AI, cloud systems and 50+ open-source projects
- 2 Applied AI & Data | RAG search, ML risk analysis and intelligent automation
- 3 Strategy & Transformation | SteerCo decisions, TOM and operational delivery
- 4 Finance & Investment | Project finance, DCF, portfolio and scenario analysis
- 5 Entrepreneurial Delivery | Consulting across four markets and end-to-end project P&L

That does not produce a perfectly linear specialist profile – fortunately. It produces someone who understands emerging technology hands-on, frames its strategic relevance, and carries it into delivery with a sound business case. The more interesting problems tend to live at exactly those intersections.

If your team needs someone who does more than put innovation on slides – someone who analyses it, builds it, and translates it commercially – we should talk. If you came for the template instead: fork it, insert your own facts, verify every claim, and the next strong cover letter is yours.

Yours sincerely,

Julian Yves Richard Corbet
